(57) **ABSTRACT**

The present invention **10** discloses a clothes hanger **12** having roller beads **14** mounted upon the hook portion **22** of the frame. The present invention **10** comprises a lower wire frame **23** which may take the conventional hanger shape or other shapes or styles with the hook portion **22** having bead-like rollers **14** captive thereon. The hanger rolls with ease along the hanger rod **16** making the task of moving heavy clothing **18**, such as coats, easy. The rollers **14** can be constructed from a variety of materials and can be of a variety of colors. The rollers can be held captive to the hook portion of the hanger **12** by a hook-shaped roller stop **24** at one distal end and the wrapping of the wire hanger at the other end **28** or by bonding the first and last bead to the hanger.
